RESEARCH SUMMARY

I study how organizations respond to and reshape policy environments and physical landscapes. I utilize multiple methods, including ethnographic field research, history, geography, interviews, policy analysis, and statistical analyses of industry data. My work examines strategies for policy influence and stakeholder management in two contexts, the craft beer industry and the development of urban natural areas, drawing on my experience as a corporate strategist focused on sustainability and government relations and as a community volunteer advocating for environmentally responsible urban development in an environmental justice community.
